tell me about u and project?
project module?
which authentication used in Projwect?
Rate yourself in Django?
Rate yourself in DRF?
Array list diff?
what is lambda?why it is used?
break pass continue diffe?
slicing in python?
what is python?
what is pythonpath?
features of python?
list and tuple diffe?
diff of py and pyc?
orm query for getting 5 data out of 10?
pickle and unpickle?
if we hit migration 6 times and then delte the migration file wat would happen?
Django architecture
how migration work backside wat happens?
Many to many relation
serializer?
rest framework architecture
orm means?
how to orm can query return queryset/object depend all()
filter data query
middleware
custom middleware procedure
list comprehension code theory
decorator code
generator code
orm
rest API
PUT POST difference

Project
lambda function
Iterator
Python module used in Project
Jinja temp
makemigrations and migrate
django mvt
django file structure
flask and django diff
threading
app level file structure
--INIT-- what is use of init
django signals
static files in django(css fie adding in html)
models in django
PUT,POST method API?
message sending in API if dont want to send status then message?
tell me about u and project?
project module?
which authentication used in Projwect?
Rate yourself in Django?
Rate yourself in DRF?
Array list diff?
what is lambda?why it is used?
break pass continue diffe?
slicing in python?
what is python?
what is pythonpath?
features of python?
list and tuple diffe?
diff of py and pyc?
orm query for getting 5 data out of 10?
pickle and unpickle?
Django architecture

how migration work backside wat happens?
Many to many relation
serializer?
rest framework architecture
orm means?
how to orm can query return queryset/object depend all()
filter data query
middleware
custom middleware procedure
list comprehension code theory
decorator code
generator code
orm
rest API
PUT POST difference
Project
lambda function
Iterator
Iterator
SQL contraint
SQL JOIN
max salary qeury
orm query to get name="yasar"
second largest salary query
[["aa",'bb'],["cc","dc"]] flat list conver like ['aa','bb','cc','dd']
{"a":12,"b":22} swap key value llike {12:a,22:b}
abstraction
SQL crud
memory management in Python
method class,static,instance?
why tuple is faster than list
Polymorphism
Pagination code logic drf
interpreted language or complied
what is docstring

what is pep8
what are data types
immutable data type
file handling
python and database connection (PDBC)
django database connection
what are advantage of generator
args kwargs
deep copy shallow copy
git and github diff?
commands push git procedure
pop and remove difference list
literals in Python
(1,2,3,4) tuple want to add new element how to
SQL alchemy
one to many,many to many,one to one sql
Rest architecture
a="aabbcc" remove repeted string
SQL and POstgressql diff
what is authenticated and authorized?
Special method in Python?
If we delete migration file then what would happen
what is asgi wasgi in django
take array write function to get index max number
mvt?
django why to use?
template inheritance
project ???
both project role
list, set,dict with implementation
fibnacis series programe?
lambda function with practical use?
genrator with practical use?
decorator
Numpy

list vs array ?
list compression?
user define object in set and dictionary
monkey patching,context manager
memory management,python path
props and hooks,settimeout()
features of react and python
types of functions,namespaces in python
map,filter,shallow,deep copy
list vs tuple
list,dict,set comprehension
types of web services
lambda function
wahi,asgi
idenfication of output l=[1,2,3,"abcd","efgh"] l[3][-1]
threading
flask vs django MVT
project explanation sigltone factory MVT
pagination and explain how u used in ur project
version control
package used
flask api/drf
wsgi
project structure
databases and it's configration
what will do if conflict in u codes
how u push project and git related questions
size of team
what size of data u handle in project
what kind of web application is it?
types of authentications? and how u used it in project
which python package u used?
react vs angular
middleware
how can we kill port if multiple dependancies are there without changing port

what new thing u explored in last 6 months
MVT
serializer
which payment gate way u used
token?
permissions
{1:'dipak',5:'alkesh',2:'dipesh'} sort using key output
t
write decorator
css indepth containt universal selector flexbox like questions
creating models in depth using orm
serializer
token creation and accessibility algorithm
openwith
context management code
exceptional handdling
python package and modules
let var constant
diffent hooks
debugging
write a decorator to write uper string output from inner function
django request response cycle
if don't want to create models in db even firing comand
modifier in python
abstraction in detail
model inheritance
pre_selected and related functions
can u get port error like **** in program?
how to kill port without changing port when other dependance also there?
what is difference between set and dictionary?
How to add elements in the dictionary?
what is scope?
How to convert local variable to global variable?
can we add set in the dictionary?
can we add list in the dictionary?

can we add tuple in dictionary?
what is encapsulation?
what is exception handling?
what is method overloading?
is python supports method overloading?
what is method overriding?
what is sql indexing?
what is the difference between authentication and authorization?
what is shallow copy and deep copy?
what is logging?
project- role, business, responsibilities?
what is PEP-8?
explain 2-3 rules of PEP-8?
what is stored procedure?
what is decorator?
what is inheretance?
how to print second highest number from list without using sort and for loop?
print the even numbers from 1 to 20 numbers using lambda function?
what is Lambda function?
what is Ajax?
how to connect model with database?
What is use of makemigrations?
what is the use of migrate?
what is Django ORM?
what is the use of middleware in django?
what is the difference between shallow copy and deep copy?
what is the difference between get and filter method in ORM?
what are the different ways to write ORM?
what are the fields used in Django?
what is the django ORM query to retrieve the data?
why are we used token authentication?
what is django celery?
What is difference between foreign key field and one-to-one field?
what is the command for creating Django Project?
what is command for creating app in the django?

how to revert the migrations in django?
what is related_to in django?
why we are writing (unique=True)?
what is signals in django?
what are built in files in any django project?
what is inside the settings.py file?
which are the Git Commands?
how to define static in django Project?
which architecture used in django?
is the django high level or low level framework?
Difference between Iterator and Generator with one example?
how to achieve Method Overloading?
what is method Overloading?
what are the types of inheretance?
What is object Oriented Programming Language?
How to handle exception in python?
What is method overriding?
write a one dictionary?
Write a orm query for ascending order?
tell me any 10 html tag?
django follows which architecture?
how to clone files in git?
how to copy files?
what are the keywords for read and write?
what is r+ and w+ mode?
what are the features of django?
what is the use of pass keyword?
how to clone branch in git?
What is PIP?
what is rest API?
what is namespaces in python?
what is docstring?
what are the types of scope?
what is the difference between list and dictionary?
what is difference between list and array?

how to retrieve the list and dictionary?
what are types of joins?
how to connect 3 tables using join?what is the query for that?
what is pickling?
what is inner join?
what is the difference between Dictionary and Tuple?
What is Model Manager?
What are the sorting algorithms in Django?
What are the types of Permissions used in your Django Project?
What is Authentication?
what are models in django?
What is the difference between Select_related and Prefetch_related?
write the django ORM query for field of DOB which I want year of particular field.
How to sort the list?
what is package and module?
How to Use django Template Tags?
What are Templates in Django?
what is generator?
What is JavaScript?
What is meaning of the debug=True and debug= False?
What is difference between simple django form and django model form?
what is the use of secret key in settings.py file?
what is sequence of middlewares in settings.py in django?
what is the use of self keyword in Python?
write a simple list?
write a one dictionary?
write one dictionary in the list?
write a program to check whether number 10 is present in the list or not?
tell me about your current project and see me that project?
tell me about your previous project and see me code of that project?
what are the modules used in your current project?
what is roles and responsibilities in your Project?
on which part you are doing the work in that project?
what is OOPS?

what is exception handling?
what is abstraction?
what is the difference between error and exception?
what is the difference between list and tuple?
Is there python interpreted?
what is multithreading?
when .pyc file executed?
what are the datatypes and explain it?
what are the types of joins?
what are the challenges come in while doing your project?
how to do authentication in your project?
can you use ModelViewset? and explain it?
what is django model manager?
WAP for missing elements from the list?
what are the operators used in PostgreSQL?
how to delete table in PostgreSQL?
what is MySQL?
what is the difference between delete and drop command in SQL?
what is the difference between database and table?
WAP for largest number from list?
check the condition if number is available in list or not?
what are views in django?which are they?
what is the difference between class based views and function based views?
what is DRF?
what is alter statement?
how to rename to column in SQL?
how to rename to table in SQL?
explain django architecture?
what are the data types in python?
what are the operators in python?
Difference between list and tuple
Difference between numpy and pandas
Dataframe is a
if(1,2):print('foo')
List is a

What is Django session
What is Django celery
Fixtures in Django
Middlewares in Django
Models in Django
wsgi.py file in Django
what is ORM and why we use
difference between get() and filter() method
Explain Serielizers in DRF
What is Rest API
What is Authentication
Difference between left join and right join
What is HTTP
Difference between django form and model form
What is REST API
Explain Decorators
Explain Iterators
Explain Generators
How will you use multiple databases in One Project
Reverse the string
Most frequent character in a string
Find the Third largest number in a list
SQL indexing
Optimization in sql
What are Models in Django
What is Package and Module?
What is Generator?
What is Iterator
Difference between deep and shallow copy
Self keyword in python?
Difference between class method and static method

Difference between Select_related and Prefetch_related
What is Model Manager?
Difference between list and tuple
find missing elements from list
What is Package and Module?
what are Generic views and what are model viewsets
constructor in python
What is Iterator
Difference between deep and shallow copy
Self keyword in python?
Difference between class method and static method
Difference between Select_related and Prefetch_related
What is Model Manager?
What are Models in Django
About Product in details
Authentication in Django
Session in Django
Middlewares in Django
Difference in between asgi and wsgi
Difference between dictionary and tuple?
What are Models in Django
What is Package and Module?
What is Generator?
What is Iterator
Difference between deep and shallow copy
what is __init__ in python?
Self keyword in python?
What is Model Manager?
Find the second largest number in a list
lst = ['aaa111','bbb222','ccc333'] how will seperate this
